

## **New *Active Forms* From Synchronology – Enhance Your Powerway Suite 2000 Document Control System**

**Combines live document editing within a workflow environment –  
perfect for Engineering Changes, Human Resource documents  
such as holiday requests plus much more!**

Synchronology, Powerway's exclusive solution partner for the UK, have added a further powerful enhancement by introducing *Active Forms*. You can now turn MS Office templates into "live" documents with full integration to the Powerway Pools, with pre-set fields and automatic workflow /approval route options and automatic check in/check out features.

Our customers tell us they need to give their users the ability to check out Forms and Templates, written, for example, in Microsoft Word or Excel.

Not only that, but they need to be able to fill in certain fields on these documents and then have them automatically checked back into Powerway and sent on a pre-defined route.

*Active Forms* achieves exactly that. You can now design forms to manage a whole range of issues - from something as complex as Engineering Change to simple things such as holiday requests - and automatically set the behaviour of the check-in and approval of these documents.

Call or e-mail now for further details, prices and to arrange a demonstration.

Synchronology is Powerway's exclusive Solution Partner for the UK.
