

Visual Navigator – Gates Power Systems

Industry Sector: Automotive

Project Live Since: August 2010

Application: Shop Floor SOP's and Work Instructions Delivery

Number of users: Approx. 200

Benefits: Documents are now stored within “hotspots” on images of the manufacturing equipment and of the products being made. Users can access only the correct version of the document (usually the latest version but the image can tie to a specific revision if needed). Gates have achieved significant time and efficiency savings by giving their operators instant and easy access to the right documents and are also in a very strong position at audit inspection as the system ensures complete control and leaves behind a comprehensive audit trail.

“One word describes Singlepoint Visual Navigator for us on the shop floor and that word is “invaluable”. Our users in the production environment have fingertip access to the correct revisions, and they enjoy using the system because it’s so quick and easy to use. The system is watertight at audit time as we can easily show the control and the full audit trail.”

Roddy Edgar / IT Manager / Gates Power Systems, Dumfries.
